

Good Afternoon Elizabeth,

Attached you will find the diet plan for Whiskey. The recipe is for one day and may be divided into as many meals as you prefer. Please weigh him in one month and email me with any change. Feel free to send me any updated medical records over the next three months and we'll revise the diet if necessary. Below are some websites in which you can order the supplements from. Please email me if you have any questions.

Best to you and Whiskey!
Angie

NUTRITION CONSULTATION

CLINIC NUMBER: 314544

DATE: 1/11/22 – 4/11/22

PATIENT: Whiskey

RES/INTERN:

CLIENT: Elizabeth Mangle

rDVM: Dr. Kellie Riper Cammarano

History of EPI, IBD, copper hepatopathy; 8 year neutered male German Shepherd with very good appetite
33.2 kgs (73 pounds) BCS: 4/9 Ideal weight is approximately 36.4 kgs (80 pounds)

Daily Diet to consist of:

16 ounces of **cooked** Tilapia – *weigh after cooking* (week 1)

790 grams of **cooked** white rice (week 1)

1 ½ teaspoons of Sunflower oil (please use recommended brand in the email) (week 1, add in very gradually)

2 teaspoons of Nordic Naturals Pet Omega-3 oil (week 3, add in very gradually)

Daily supplements: (to be mixed in with one or more meals)

8 teaspoons of Balance IT® Canine –Cu (week 2, add in very gradually)

The diet formulation contains approximately 1750 kilocalories and should allow Whiskey to gain weight. Please weigh him in 4 weeks to see if he is losing or gaining weight. Please contact us if noticeable change is observed so that we may adjust the diet appropriately as needed. We are hoping for weight gain while on this diet plan.

The diet formulation above is primarily to help Whiskey with his medical conditions. It is made to be moderate in protein and carbohydrate and lower in fat and provides an amount of copper that is similar to the therapeutic hepatic diets. It is enriched in long chain omega three fatty acids from marine sources which are known to reduce systemic inflammation. We recommend not feeding any other treats or human food until he is stable on the above diet, at that time you may contact us for a safe list of fruits and vegetables to add in. If he becomes a picky eater, you may cook the rice in a low or no sodium added broth to add flavor to the meal. You may also have to use a food processor or blender to mix the food so that he can't pick out his favorite morsels, then add in oils and supplement after you take the mixture out of the processor.

The vitamin and mineral supplement recommended in this diet should be easy to acquire. The all-in-one supplement **Balance IT® Canine-Cu** can be ordered online (www.balanceit.com). This supplement can be added to the ration when preparing the daily meal. Please add in the ingredients weekly as outlined above. If adverse reactions are noted when adding a specific ingredient please discontinue and contact us for alternatives.

This diet is made to meet Whiskey's requirements for one day. To make things more efficient you can cook and prepare 4 days' worth (multiply all quantities by 4). Then, place the food into equal portions in 4 containers that can be refrigerated. Take out each portion of daily food and heat in microwave for 10-20 seconds and stir well until the food is evenly warmed with no hot spots, then add in oils and supplement. Typically a daily portion is split into two (2) meals a day. If you have any further questions regarding the diet please feel free to contact Ms. Angie Struble at ams29@cornell.edu or Dr. Wakshlag at iw37@cornell.edu
